

# Spinal Decompression News

By Dr. John Falkenroth, D.C. ■ Issue #101

Introducing the New Medical Breakthrough That is Providing Relief to People Who Suffer From Chronic Back Pain\*

(\*According to American Journal of Pain Management)

**Have you heard about the new service we've just added to Five Star Chiropractic Center?** It is called Spinal Decompression and it is one of the biggest medical breakthroughs we've seen in recent times.

I was talking to a physician recently who said they get calls weekly from patients who had come in previously for help with back pain, who call a few days later saying "Gee, the pain hasn't stopped. What else can I do?" They aren't candidates for surgery but traditional medicine isn't working for them. We call such cases "chronic." That's where **Spinal Decompression** comes in!

Thanks to a new technology called Spinal Decompression, there is an alternative to treating back pain other than using surgery. This new procedure has made a tremendous impact on patients who have seen their primary physician, physical therapist, and surgeon with little results. A recent study on spinal decompression showed that most of the participants who had disc disease reported relief of symptoms after receiving therapy.

In the world of back pain sufferers, this is good news!

***Our Spinal Decompression Machine!***

What is most amazing is the fact that spinal decompression costs much less than the cost of surgery. Most of my patients who reported constant pain before receiving treatment could not afford the price of surgery but thanks to this technology, they can now afford treatment. Spinal decompression does not involve surgery or drugs. Our patients don't have to worry about the risks of surgery and the hassle of recovery time. The bottom line is, Spinal

Decompression is a breakthrough that is helping thousands of patients across the country. The good news is, we have recently added Spinal Decompression to Five Star Chiropractic and already patients are loving this service.

Why does Spinal Decompression work?

As doctors looked at what causes severe back pain, they found that spinal decompression had the effect of "decompressing" the spine. In other words, we have the effects of gravity so we have pressure pushing on our discs in everyday life. All this pressure forces the spine to compress, or push down, on the discs in our back. This can cause chronic back pain. Spinal decompression "decompresses" the spine, taking the pressure off, nourishes the discs and allows the discs of the spine to go back to their natural healthy state!

## Free Tour and Free Consultation:

### **Interested in learning more about Spinal Decompression?**

You are welcome to get a Free Tour of our Spinal Decompression Suite and you're eligible for a Free Consultation. There are no catches and no obligations – simply a chance to check out this new technology that is revolutionizing back pain treatment! Only one thing is required – and that is to call our office at **(831) 475-8600** today and schedule a **FREE** Decompression Consultation for you or a family member. See you soon!
